REPLY TO ATTN OF: TDET/UFO

SUBJECT: UFO Observation

20 July 67

TO:

Mrs. [redacted]
[redacted]
Manchester, Pennsylvania

Reference your unidentified observation. The information which we have received is not sufficient for a scientific evaluation. Request you complete the attached FTD Form 164 and return it in the envelope provided. Thank you for reporting your observation to the Air Force.

JAMES C. MANATT, Colonel, USAF
Director of Technology and Subsystems

Please Forward to someone who will answer.

Enclosed you will find a self-addressed and stamped envelope, please answer.

I have inquired around and cannot find anyone to tell me if what we see could be satelites. This is the only address I could find that might be able to tell me.

I am no letter writter or artist but enclosed is a crude map.

We have been watching very bright round lights in the sky. We see them every nite. When they go under a star they black out the star. The light is the same all of the time. Bright, round

SEND 164.

smooth edges.

I used to watch the Satelite Echo #1. these lights go as slow or even slower. to be sure it is moving one must line it up with an object or star or it would not be noticed. Even in pointing it out if one sees it, the other has a hard time sighting it.

the Star #1 on the map and Star #2 seams to be a guide, a turning point, the square our veiwing point,

Hear are a few, June 23, #1 the blue line [redacted] June 24, [redacted] line #2 & 3, look how it jumped and went back & forth. June 25, cloudy but saw others. June 26, #4 & 5 [redacted] #4 went straight #5 perfect square around #2 star [redacted] #6 around #1 star to #2 star June 27, four of at an outdoor movie.

— saw #7 around #1 star #8
coming also. watched to see
what would happen when
they met. #8 kept going #7
went around #8. June 28
#10 and 12 met and went
together #12 kept jumping
from side to side then would
make a leap forward.

There are many more but
this is a few to give you an
idea of their course.

There is silence no noise
the light bright & round.
slow and straight steady all
but #12 which we see almost
every night. #1 we see every
night we look for it. Neither
of these stars are the north star.

We are in line with plenty
of airplanes but they are not
planes, ballons could not be

thu regular or go around star
or collide when come in the same
path. Satelites around star
and other to prevent collision.

We have enjoyed watching
them.

Could you please give us
an idea what we are watching.

We have covered everything
meteors, etc. But these are
regular every night we look
we can see them.

Please answer

Mrs. [redacted]

One person here insists
they a U. F. O. on patrol.
