

AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency)	REPORT NO.	PAGE	227670	OF	2	PAGES
Air Force Section, Hq USFA	IR-114-50					

1. A Soviet Army publication (name unknown), a magazine for technical news, allegedly the issue of February, 1950, published by the High Commissariat of the Armed Forces of the USSR, 25 Red Square, Moscow, USSR, under the patronage of Marshalls TOLBUCHIN and BERIA, contains an article about the "Flying Saucers". The magazine is classified "Secret" and is distributed to officers only. (Informant believes that distribution is permitted only to Majors and above.)

2. The description of subject apparatus (Discs) is as follows: (See also attached Exhibit "A")

Diameter of Disc: about 45 meters.

Thickness of disc in its center: about 52 cm.

Material of disc: Sheet metal of a special alloy (containing also steel) coated with a special aluminum paint.

3. The discs were allegedly designed and constructed by the Military Technical Experimental Institute in Leningrad, USSR. The operation of the discs is explained as a "remote control" experiment, with no military value attached to it for the time being. The Soviets claim to have reached heights of up to 25,000 meters with the discs.

4. In the same magazine an "A" - bomb "500" is described which has allegedly 25 times the power of the bomb dropped by the Americans on Hiroshima in 1945. The bomb uses atom "125", but the name of the atom could not be furnished. (See attached Exhibit "B".)

5. Confidential informant was able to read these articles while alone in the office of an MGB official. Attempts are currently being made to obtain this magazine which deals with subjects in a more detailed manner.
