At approx. 5:35 on Nov 23, 1956 I observed while on Soc Duty 2 objects in the sky to my N by E Dir approx $3\frac{1}{2}$ miles - low - clear visibility - weather good. They appeared to be moving fast & weaving in a figure 8 motion. In few min the or one moved quickly west approx 20° & stayed there moving in a fig 8 motion till daylight caused them to fade into the atmosphere. I know what I saw but I can't identify them except to say they weren't stationary, they looked like a dime & they seemed to throw off a phosphote light. Even tho I had binoculars I still couldn't tell. You can't seem to get the objects to stay still long enough to determine what they are.

I'm sorry for the delay.
I've been moving + etc —
