Incident 389

Name and address of observer: [REDACTED] (observed by 150 other people at an Air Show).

Occupation and hobbies:

Comdr, USNR
Aeronautical Engineer
Airport Manager

Comments of Interrogator relative to intelligence and character of observer(s):

Appears to be reliable

NARRATIVE SUMMARY:

"At 1040T 3 July 1949, [REDACTED], Comdr. SA(3), USNR, 76108, sighted what he thought to be a flying disc while standing at the airport at Longview, Washington. [REDACTED] is an aeronautical engineer and manager of the airport at Longview. [REDACTED] stated that while on active duty he had had experience with the pilotless aircraft and guided missile program.

[REDACTED] stated that when he first sighted the disc, it appeared to be at an altitude of approximately 30,000 feet northwest of the airport and traveling in a southeasterly direction at 300 miles per hour. When first sighted, the disc had about 30 degrees of altitude. It remained in view three minutes, traveling at a constant altitude in a large arc from the position of initial sighting until lost directly overhead in the sun. A definite, regular oscillation was observed and was timed at the rate of 48 oscillations per minute. He described this motion as a skulling or falling leaf motion rather than a movement through the axis of the disc.

The wind was at all times observed to be from the southwest at a definite angle to the line of flight of the disc. This direction was confirmed by a constantly rising column of smoke from an industrial plant and by smoke from sky-writing at 10,000 feet. [REDACTED] reported ceiling and visibility unlimited at all times with wisps of cirrus clouds in a small fractional portion of the sky. He described the object as the size of the head of a pin held at arm's length. It was metallic in color and cast a reflection upon each oscillation. He stated it was definitely circular rather than oval or globular in shape. He was unable to estimate its thickness. No smoke or vapor trail was observed.

Upon the same occasion [REDACTED] reports observing a second disc at 1049T and a third at 1125T. He described them as identical to the first observed. These were initially sighted at an altitude of 45 degrees from the west at approximately 30,000 feet. They also disappeared into the sun overhead after a three minutes' observed flight.

A local air show was scheduled for the afternoon of this day and there were approximately 150 people on the field at this time. All of those present saw the objects. Sammy Mason, a stunt pilot of Big Bear, California, agrees with and confirms Mr. [REDACTED] observations. Arthur Robertson, Longview, Washington, an aeronautical engineer and an employee of [REDACTED] estimated altitude of these

discs at 7,000 feet and felt the first one could have been a balloon. He stated it was yellowish in color. In his opinion, however, neither of the last two observed could have been balloons.

NARRATIVE SUMMARY:

My experience in radio control of pilotless aircraft and guided missiles for the Navy at NAMU during the war, and over 20 years of aircraft study does not permit my identification of the objects which were seen. They definitely were not balloons, birds, common aircraft, parachutes, stars, meteors, paper, clouds, or other common objects. They moved in a regular motion either straight or in curved lines. They were all at approximately the same altitude but moved on different courses as indicated on the sketch. The oscillations were clearly visible and timed on the 3rd sighting.

A small group of people away from the airport have reported to me that they later sighted three additional objects later in the morning at different times. These reports are from groups of reputable people who also saw the objects while at the field. A phone call from Astoria from a Mr. J. Halberg of 466 James St. to me this morning revealed that he had sighted an object at about 4000 feet described as about the size of a DC3 that oscillated as it came down the coast and turned to sea about 1300 the 3rd. [REDACTED] is a reputable business man and licensed pilot. He said other aircraft were in the air at the time and this was not a common aircraft. He reported that a different aircraft sound attracted his attention to it.

I tried to alert the local radio station to get observers to report on direction and angle of observation from different localities and report to me to try to triangulate for course and altitude. They thought it was a publicity stunt and did not cooperate enough to permit getting the desired data.

Seattle 99, Washington.

Subject: Unidentified Objects Sighted July 3 at Longview.

Gentlemen:

As requested by your investigator who called on us this morning the enclosed sketch is forwarded to indicate the general details of the sighting which occurred on the morning of July 3, 1949. This was observed by upward of 150 persons who were at the Longview Airport getting ready for the JC Air Show. It was viewed by our engineers, many pilots, police, prominent citizens, etc. and is verified by all observers.

My experience in radio control of pilotless aircraft and guided missiles for the Navy at NAMU during the war, and over 20 years of aircraft study does not permit my identification of the objects which were seen. They definitely were not balloons, birds, common aircraft, parachutes, stars, meteorors, paper, clouds, or other common objects. They moved in a regular motion either straight or in curved lines. They were all at approximately the same altitude but moved on different courses as indicated on the sketch. The oscillations were clearly visible and timed on the 3rd sighting.

A small group of people away from the airport have reported to me that they later sighted three additional objects later in the morning at different times. These reports are from groups of reputable people who also saw the objects while at the field. A phone call from Astoria from a [redacted] st. to me this morning revealed that he had sighted an object at about 4000 feet described as about the size of a LC3 that oscillated as it came down the coast and turned to sea about 1300 the 3rd. [redacted] is a reputable business man and licensed pilot. He said other aircraft were in the air at the time and this was not a common aircraft. He reported that a different aircraft sound attracted his attention to it.

I tried to alert the local radio station to get observers to report on direction and angle of observation from different localities and report to me to try to triangulate for course and altitude. They thought it was a publicity stunt and did not cooperate enough to permit getting the desired data.

PERT PILOT REVEALS
MISSILE OF EARLIER UFO SIGHTING

The following UFO report—though one of the early sighting cases—has particular value because of the identity of the chief witness, Commander M. B. Taylor, USNR Retired. Commander Taylor, a former Navy pilot, was officer-in-charge of guided missile work under Rear Admiral Delmer S. Fahrney. This report was forwarded to NICAP by Commander Taylor at the suggestion of Admiral Fahrney, when he was Chairman of NICAP's Board of Governors.

"My good friend Admiral Del Fahrney has suggested that I write you directly in regard to our experience in the flying saucer field," Commander Taylor told NICAP. "During World War 2 we had extensive experience in the actual handling of guided missiles and pilotless aircraft by means of radio control, using television and radar direction, target seekers, etc.

"We flew the first jet and rocket powered controlled missiles successfully launched in this country and accumulated many hours of flying aircraft of various types by remote control. We believe this experience qualified us somewhat for the remote observation of aircraft and flight phenomena."

The details of Commander Taylor's report follow:

Date — July 3, 1949

Location — Longview, Washington

Weather — Clear with bright sunlight, visibility unlimited

On this particular date an Air Show was just getting under way at the Longview Fair Grounds. Approximately 200 persons already had gathered, including a number of qualified pilots. Commander Taylor, in charge of the public-address system, was commenting on the sky-writing maneuvers of a Stearman at 10,000 feet when a brilliant, round object suddenly appeared from the west.

"The object definitely moved with an undulating motion," Commander Taylor states. "Its thrutchip axis was rotated approximately 30 degrees above and below level—through a 60-degree angle.

"Many of the viewers were qualified airmen, all of whom agreed on the local wind direction, against which the object moved; its period of undulation; its metallic appearance; its maneuverability and seemingly right-angle corners it could turn through; its speed across the sky; height above the skywriting; apparent size in comparison with the Stearman; and other observations which definitely precluded the possibility of its being a conventional aircraft, balloon, or the like.

The bottom appeared dark, Commander Taylor reported, and observers who saw it with 8x30 glasses said it looked much like a discus used in track events. The object appeared like brilliant metal when the sun finally reaches the right angle to flash on top of it.

"No one reported any dome on top of it," the Commander's report continues. "My own observations as to size would be that if it were at 20,000 feet elevation it would be about 50 feet in diameter.

"The object, when almost directly overhead, turned to the south. When it was about 60 degrees above the horizon it turned sharply to the northeast. Then it disappeared behind a column of smoke which arose from a nearby paper mill to a height of 20,000 feet. This height was estimated on the basis of the direction of the smoke column curvature, and from later reports by the skywriting pilot. The object was well above the skywriting."

Commander Taylor stated that the object was approximately round when seen, in "plan form." Its speed was slow as it neared the zenith, but after this it moved away rapidly.

"At no time," said the former missile officer, "did anyone hear a sound. Those

of us at the Air Show saw only one such object, but others who arrived shortly afterward reported seeing up to a dozen at approximately the same time. Everyone agreed that the single object (seen at the Air Show) disappeared in apparent pursuit of the group.

Summing up the UFO report, Commander Taylor reaches this conclusion:

"The sighting was definitely of some flying object unlike anything then or even presently known. It appeared to move without causing a shock wave or other noise, although its speed during the latter part of its flight was such that one would expect to hear some sort of noise from it."
