SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin text of report on AF Form 112—Part II.)

A greenish-blue brilliant light with an incandescent glow in the form of a tail lasting about 15-20 seconds, traveling North to Southwest in a descending curve at an angle of about 30° was seen on/or about 2000 - 2030 hours, 28 October 1951, approximately seven (7) miles from Buena Vista, Colorado.

The observer is a rated pilot of the Weather Squadron indicated above. His recital was simple, direct and complete as to detail.

REPORT NO.

PAGE 1 OF 1 PAGES

On/or about 2000 - 2030 hours, 28 October 1951, I was at the base of a mountain approximately seven (7) miles South from Buena Vista, Colorado, on a hunting trip and I was sitting in a car facing Northwest. I was startled by the appearance of a very brilliant light, color was greenish-blue. This object approached from the Northeast going North to Southwest and in a descending curve. I would estimate the angle it was descending at at approximately 30°.

The object stayed within my sight approximately 30 seconds - the brilliant light that is. I wouldn't attempt to estimate the speed. After the passage of the object, there appeared to be a tail or incandescent glow in the form of a tail. It was just a glow after the light was descending. It lit up the country side, but the glow was just an incandescence in the sky. This glow lasted about 15-20 seconds and it changed color and seemed to change toward a white - the green bleached out into sort of a white color.

The only deduction I could draw from it, assuming an object had passed by, is that the speed at which it was going caused it to glow and particles from this object changed color as the temperature of the particles changed.

With a visit to the spot I could, I believe, very accurately determine the direction the light was traveling. The directions I gave previously were an estimate as the roads were only tracks along the mountains and we wove in and around, and I am not positive of the exact direction I was facing when I saw the object.

EXTRACT FROM STATUS REPORT # 2

DATE: 28 Oct 51

TIME (Local): 2000 - 2030

LOCATION: Buena Vista, Col.

LENGTH OF TIME OBSERVED: 15-20 Seconds.

SOUND: None

SPEED: Unknown

ALTITUDE: Unknown

HEADING: N to SW

SOURCE: AF Major

ACTION OR COMMENTS: Example of green fireball phenomena. No conclusions.

DESCRIPTION OF INCIDENT: Greenish-blue brilliant light with an incandescent glow in the form of a tail.
