13. Any details that cannot be fully explained by the above questions.

There were 2 discs that remained parallel the whole time - it seemed like they were rolling along. We had been watching the skies for meteors for about 20

minutes, when these caught our eyes.
At first we both thought they were
meteors, but the comparative (slowness
to a meteor) the size, shape and fact that
there were two of them made us realize
they were different objects than we had
ever seen before.
