1. DATE - TIME GROUP 1551Z	2. LOCATION BELLEFONTAINE, OHIO
3. SOURCE MILITARY	10. CONCLUSION RADAR: AIRCRAFT VISUAL: BALLOON
4. NUMBER OF OBJECTS ONE	
5. LENGTH OF OBSERVATION	11. BRIEF SUMMARY AND ANALYSIS At 1551Z, 1 Aug 52 the 664 ACW Sq painted a target 20 mile NNW of Wright-Patterson AFB and traveling on a course of 240 deg at 400 knots. Two F-86's were vectored toward the target but the radar did not, however, have a height finder. The two jets were flying at 30,000 ft and when they reached the area the controller requested them to get a visual. At approximately this time the ground radar failed. The two pilots sighted an object far above them and one pilot managed to photograph the object but they could not reach the altitude of the object because it was too high.
6. TYPE OF OBSERVATION VISUAL 8 radar and radar	
7. COURSE	
8. PHOTOS	
9. PHYSICAL EVIDENCE	Comments: The original object painted by the radar was an aircraft flying out of Cleveland. The object sighted by the pilots was later positively identified as an upper air research balloon.

1 August 1952

Bellevue, Ohio

An unidentified object was observed at 2100 on radar, and fighters were vectored in for an attempt to identify the unidentified radar return. Fighters were able to see the object, but were not able to get near it because of the altitude of the object. The object ~~is~~ observed in this sighting has positively been identified as a type of upper air research balloon. This object actually consisted of four balloons attached to one "load". ~~This~~ this load weighed approximately 500 pounds, ~~subsequently~~ and consisted of metal measuring devices that would give a radar return.

revised with "Summary" of Case #9.*

Information Only.
Solution: Balloon
Source: Military

1 Aug 52
Bellfontaine, Ohio

2. Bellfontaine, Ohio - 1 August 1952

At 1551Z on 1 Aug 52 ground radar from Wright-Patterson AFB sighted an unknown object on its scope. Two F-86's from the 97th Fighter-Interceptor Squadron were vectored into the area and observed a silver round object. Airborne radar contact was not made but attempts were made to get gun camera shots. The object was above the climbing capability of the F-86's and appeared to be steadily gaining altitude when the fighters returned to base for fuel.

The gun camera film showed a moving object which is too indistinct for further analysis.

Solution: Was a balloon. There were local balloon releases prior to the sighting.

Summary
CASE #9

1 August 1952

Bellefontaine, Ohio

Description of Incident

At 1551Z a radar track appeared 20 miles NNW of W-P AFB. The course was 240 degrees at 400 knots. Two F-86's under GCI control were then SW of that position. The fighters were vectored and made visual contact at 1555Z. Fighters stayed with the object until 1613Z.

Interrogation of sources, an AF major and lieutenant, reveal the following:

a. The F-86's climbed to 48,000', fell off, and then made a second climb to 48,000'. The pilot made a camera run. The major estimated the object at 50 to 70,000'. The object's size, accepting source's estimate of distance was 24-40' in diameter and source said his optical sight just covered the object. The films were not sufficiently clear. The object appeared as a fuzzy, small image in the upper right hand corner with discernable motion to lower left.

b. Two important facts were established: Re-affirmation that the UFO moved at 400 knots and indication that the two F-86's and UFO appeared simultaneously on the ground radar scope. It is obvious that all eyes and antennas were fixed on the same object.

Comments

- but speed relative!
The object was not a balloon, since the speed was too fast. A rawinsonde was released at 1500Z and moved off to the east. The object moved ag against the wind. The blip size was that of a normal a/c. The object was not a known a/c because the altitude was too high. The object was not astronomical as dual radar returns eliminate this. Electronic or visual mirage of meteorological phenomenon is out of the question as the radar set was on high beam, and both would not occur simultaneously in the same place. The sighting occurred "above the weather".

Conclusion

Description of Incident

At 1551Z, a radar track appeared 20 miles NNW of W-P AFB. The course was 240° at 400 knots. Two F-56's under GCI control were then located ten miles SW of that position. The fighters were vectored and made visual contact at 1555Z. Fighters stayed with the object until 1613Z.

Interrogation of sources, an AF major and lieutenant, reveal the following:

a. The F-56's climbed to 45,000', fell off, and then made a second climb to 45,000'. The major made a camera run the second time and received a weak return on his radar gunsight. The lieutenant's sight was "caged" so he received no return. The major estimated the object at 12,000-20,000' above his altitude of 45,000'. This estimate was substantiated by the range capability of the radar gunsight. The object's size, accepting source's estimate of distance, was 24-40' in diameter and source said his optical sight just covered the object. The films were not sufficiently clear. The object appeared as a fuzzy, small image in the upper right hand corner with discernable motion to lower left.

b. The AC&W Squadron established two important facts: Re-affirmation that the UFO moved at 400 knots and indication that the two F-56's and UFO appeared simultaneously on the GCI scope. It is obvious that all eyes and antennas were fixed on the same object.

Comments

The object was not a balloon, since the speed was too fast. A rawinsonde was released at 1500Z and moved off to the east. The object moved against the wind. The blip size was that of a normal aircraft. The object was not a known aircraft because the altitude was too high. The object was not astronomical as dual radar returns eliminate this. Electronic or visual mirage of meteorological phenomenon is out of the question as the radar set was on high beam, and both would not occur simultaneously in the same place. The sighting occurred "above the weather".

1. With reference to your unidentified flying object report (FLYOBRPT) of 011550Z August 1952, it is requested that you complete the inclosed Radar Observation Data Sheet. You may omit questions 1, 2, 4, 5, and 6 of Part II as the Air Technical Intelligence Center is already in possession of the complete weather data.

2. However, question 8, Part II, is extremely important. Specifically, it is necessary to know if the unidentified flying object and the two F-86's appeared simultaneously on the radar scope.

~~SECURITY INFORMATION~~

T52-14017-A

UNCLASSIFIED

I. QUESTIONS REGARDING DETECTING RADAR EQUIPMENT

1. What type radar equipment is involved?

AN/FPS-3 Search Radar

2. Has there been any recent maintenance difficulties? If so, describe.

Negative

3. What type modulator (i.e., spark gap, hard tube, etc.) is used in the radar equipment?

Hydrogen Thyatron (hard tube)

4. Was the AFC (automatic frequency control) circuit of the receiver operating properly?

Yes - in auto position

5. Has interference from another radar set been observed recently, and are personnel familiar with the effects caused by an interfering signal?

None observed, and personnel are familiar with adjacent station interfering

6. What type indicators, "A scope", "B scope", etc., were used to follow the target? signals.

PPI Scope

7. What was the radar scan rate?

3.3 RPM

8. What was the approximate frequency of the transmitter?

1290 Mc

II. GENERAL QUESTIONS

1. What were the general weather conditions at the time unidentified target was observed?

X

2. What weather data from nearby U.S. weather stations is available on temperature vs altitude, humidity vs altitude, and wind velocity vs altitude?

X

3. Was the target observed by any other nearby radar equipments? If so, give details.

No

4. Are the operator and the supervisor familiar with the effects of anomalous (duct-effect) propagation as they pertain to this type radar?

X

ATIC Form 332 (18 Jun 52)

Page 1 of 2

7
DOWNGRADED AT 3 YEAR INTERVALS
DECLASSIFIED AFTER 12 YEARS.
DOD DIR 5200.10

752-14017

UNCLASSIFIED

5. Has anomalous propagation been observed to extend the range of ground clutter by this radar at this site, and did this condition exist during or near the time that unknown target was observed?

X

6. What effects of rain storms and lightning have been observed on this radar?

X

7. Were any checks made to determine if unknown target could have been one of our own aircraft?

Yes. Aircraft were directed to the target by the controller. Target was believed to be another jet aircraft until observed by the flight leader.

8. Was any interception attempted? If so, give details.

Intercept was successful, but target was too high for the aircraft to get close for positive identification. Pictures were taken.

III. SPECIFIC TARGET QUESTIONS

1. What technical personnel observed the unknown target? Have they been questioned thoroughly? What was their opinion? Maj. Smith, Flight Leader and Lt. Lott, Controller were observers. The target intercepted was not the target on the PPI Scope it must have been flying the same course at the same time.

2. Was a permanent record "track" made of the target positions as they appeared on the indicators? If so, attach to this report.

None

3. At what range, azimuth, altitude, and time was the target observed?

Range 25 miles, azimuth 230°, altitude unknown. High beam was used - target was above 10,000 feet.

4. How did the target appear in size and shape as compared with conventional aircraft targets?

Normal

5. Was the target of consistent size, or did it change rapidly?

Yes, until about one minute after intercept.

6. Was the speed of the target constant or variable? Explain.

Speed consistent about 400 knots.

7. Did the target appear "fuzzy" or clear and sharp as compared with a known aircraft target?

Clear until fade.

8. What other (aircraft) targets were observed in the same general area, altitude, and time as that of the unknown target?

2 F-86's from 97th Fighter Interceptor Squadron, Wright-Patterson AFB, Dayton, Ohio, at 30,000 feet, M.S.L.

At 1551Z a track appeared on the scope 20 miles north northwest of Wright-Patterson Field. Two F-86's under control were then located 10 miles southeast of that position. Major Smith of the 57th Fighter Interceptor Squadron was flight leader. The track was making a ground speed of 450 knots as a cut off vector was given. The flight leader immediately tally he'd it at 10500 on the track and the heading was changed 30 degrees to cut the track off more. The clock position was affirmed by flight leader. Track was on scope for 15 miles heading 240 degrees from time of pickup. Flight leader reported object as silver in color round in shape. Flight leader climbed to 40,000 feet, and estimated object at 70,000 feet. Flight of F-86's stopped with object until 1113Z returning to base low on fuel. At the time it was dropped object was 5 miles Northwest of Springfield, Ohio. Attempts had been made to get gun camera film.

The weather at 1305 was 25, 300, light wind, light rain, and light fog.

UNCLASSIFIED

16-55509-2 U. S. GOVERNMENT PRINTING OFFICE

This case includes one (1) 5" x 7"
photograph.

1) The object picked up on ground radar had actually been a jet plane, flying out of Cleveland. It had not been identified immediately because the Bellefontaine station had not received its flight plan. At 10:45 that morning the jet had been north of Dayton, flying at low altitude on a southwest heading, at a speed of around 525 miles an hour—the exact time, position, and speed of the radar unknown.

2) The pilots of the interceptors never saw this jet. What they saw, what their gun radar detected, and what their gun camera photographed was a twenty-foot radiosonde balloon that had been released from Wright-Patterson Air Force Base that morning shortly before the sighting. Ground radar, on the other hand, never picked up the balloon.

3) The chief reason for the confusion was that ground radar did not have a height-finding device. When the operator notified the pilots that his scope showed a blending of the returns produced by the pursuit jets and by the unknown, neither he or the pilots had any way to tell whether the unknown was directly above or directly below the pursuing jets. At 30,000 feet the pilots were too high to see the Cleveland jet far below them. But they did see the balloon above them and naturally assumed that it was the object they were supposed to be chasing.

4) Since the ground radar stopped functioning at this point, the operator could no longer track the course of the unknown or of the interceptors. If the radar had been working, he would have seen that the target continued on to the southwest while the interceptors were searching in a different area to the north.

FINAL GALLEY PROOF

Galley 63—THE WORLD OF FLYING SAUCERS

5) The photographs confirmed this reconstruction of a complicated series of events. The pictures obtained by the gun camera displayed a round, indistinct blur. Analysis showed that the size of the object was that of a twenty-foot sphere—a balloon—photographed from a distance of 30,000 feet.

st 1, 1952, two days after the Michigan incident, such a
arose with an impressive radar-visual-photographic sighting
Bellefontaine, Ohio [2]. At 10:45 A.M. C.D.S.T., the radar
operator at the Air Defense command post picked up an uniden-
tified target north of Dayton, moving southwest at a speed of about
525 miles an hour. Two jets from Wright-Patterson Air Force Base
were scrambled for an intercept and were vectored in by ground
control. Since the ground radar was not equipped with height-
finding devices, however, the operator could not direct the pilots
to a specific altitude; he could only tell them whether they were
nearer to or farther from the target.

When the jets had reached 30,000 feet, ground radar informed
them that they were almost on target, which was still moving
southwest at the same speed. A few seconds later, the returns from
the jets and the UFO blended on the radarscope and the operator
advised the pilots that they would have to continue the search
visually. At this moment, unfortunately, the ground radar suddenly
failed. Soon after communication between ground and air had
ended, the lead pilot observed a silver-colored sphere several thou-
sand feet above him. Both jets went after it but although they
climbed to their maximum altitude, 40,000 feet, neither could get
close enough to identify the object, which was still some 30,000 feet
above them. One pilot, however, managed to expose several feet
of film with his gun camera. At the same moment the warning light
on his gunsight radar blinked on to indicate it detected a solid
object. At this point the jets broke off the intercept and started
back to Wright-Patterson Field.

Both pilots then realized that, although they had been chasing
an unknown for some ten minutes, they were still northwest of
the base in almost the same area where they had started the inter-
cept. This surprising fact seemed to indicate that the unknown had
slowed down from its original speed of 525 miles an hour, to hover
in the sky nearly motionless.

Flying-saucer addicts regarded this series of events as an iron-
clad case. One of them commented, "For the first time a saucer
had been photographed during simultaneous radar and visual sight-
ings, with the camera 'plane [sic] also locked on by radar. It
was absolute proof that this saucer was a solid object, a controlled,
disc-shaped machine." [10, p. 109]

After sifting the evidence, ATIC investigators eventually found
the more prosaic though complicated solution to the puzzle:

1 Aug

F5600

2 Jet Pilots See Object

DAYTON, Ohio, Aug. 1 (AP).—Jet interceptor pilots reported to Wright-Patterson Air Force Base officials today that they saw an object in the sky which they did not think was a light reflection.

It was the first time pilots checking on flying saucer reports here had made such a positive statement.

The two interceptors were sent up about 1:45 a. m. after the Air Force base had received five or six reports of "flying saucers."

They told officers they went up about 17,000 feet and for about ten seconds watched a bright object which hovered above them. It then disappeared at "a high rate of speed."

"We deliberately maneuvered around to make sure it wasn't a light reflection. At first it appeared red and white and then white only," they said.

The pilots, attached to the 97th Fighter Wing, were Maj. James B. Smith, and 1st Lt. Donald J. Hemer, recently transferred from O'Hare Air Force Base, Park Ridge, Ill.

The Air Technical Intelligence Center, in charge of "flying-saucer" investigations, immediately ordered the two pilots to stop commenting further on their experiences and ordered a ban on pictures of the two.

In the report to Capt. E. J. Ruppelt, in charge of "flying-saucer" studies, the two pilots said they were unable to estimate the object's location because "it was dark and there was nothing to compare it with."

Although the official report said the pilots observed the object for about ten seconds, that probably referred to the brief time they got a good look at it.

One of the pilots reported: "I don't think the light was a reflection. I deliberately maneuvered around it at several angles to make sure it wasn't a light reflection. If it had been, there would have been a change."

UNCLASSIFIED

FLYOB RPT - 1 Aug 52 - Bellefontaine, Ohio

I. Interrogation of Maj Smith and Lt Hemmer by Lts Flues and Olsson revealed following:

A. F-86's climbed to 48,000 ft., then fell off, then made a second climb to 48,000 ft. Maj Smith made a camera run the second time and received a weak return on his radar gunsight. Hemmer's sight was "caged", so he received no returns. Smith estimated object at 12-20,000 ft. above him at 48,000 ft. This estimate is substantiated by range capability of radar gunsight.

B. Object's size, accepting Smith's estimate of distance, is 24-40 ft. in diameter, as computed from the fact that the gunsight is two miles in diameter and Smith said pip just covered object.

C. The films were not sufficiently clear. Object appeared as fuzzy small image in upper right hand corner with discernable motion to lower left.

II. The object is not:

A. Balloon speed too fast. 1500Z radiobeacon release moved off to east. Object moves against the winds. Blip size is that of normal aircraft.

b. Known aircraft. Altitude too high.

c. Astro. Dual radar returns eliminate this.

d. Electronic or visual mirage or meteorological phenomena. Radar set is on high beam. Both would not occur simultaneously in same place. Sighting occurs "above the weather".

AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency)	REPORT NO.	PAGE	OF	PAGES
Director of Intelligence, CAirC	IR-60-52	2	2	2

While aboard the U.S. vessel Santa Luisa, which was at anchor in the mouth of the Guayas River, Capt. [REDACTED] called my attention to three round flat stationary objects overhead. These objects were to the northwest and high at an angle of approximately 75° elevation. They were metallic in color and reflected the sun, which at 3:00 p.m., was a little more to the west than the objects. After about 5 seconds one of the objects dived down to the west and turned back to the northwest. While watching the one I lost sight of the other two. Within another 5 seconds the one I was watching was out of sight. The size is unknown due to the unknown altitude. Each would appear about the size of a pin head held at arm's length. I estimate the distance as ten miles away on the 75° degree angle and the size as fifty feet in diameter. From my angle the objects appeared almost round in shape.

[REDACTED]
M/Sgt., USAF
Mission
Ecuador
