

1. DATE - TIME GROUP 11 Feb 53 2045Z	2. LOCATION Tunis, Libya
3. SOURCE C-119 a/c crew	10. CONCLUSION Possibly Astro (VENUS)
4. NUMBER OF OBJECTS One	
5. LENGTH OF OBSERVATION 5 - 55 Min.	11. BRIEF SUMMARY AND ANALYSIS Very bright light with halo of diffused light encircling it appeared off right wing of a/c and was visually observed to rise and descend. Length of observation by individual persons varies from 5-55 min. Object was observed from C-119 a/c traveling at an approx speed of 170 knots at an alt of 7500'.
6. TYPE OF OBSERVATION Air-Visual	
7. COURSE	
8. PHOTOS ☐ Yes ☒ No	COMMENTS: 1. 4 out of the 6 observers maintain that the object was not a star, the other two will not commit themselves. All are experienced airmen. 2. Object remained stationary off right wing and was seen for 55 minutes. The planet Venus offers a possible explanation in that it is in the approx position of the object.
9. PHYSICAL EVIDENCE ☐ Yes ☒ No

11 February 1953

I. Description of Incident

An unidentified object was observed by the crew of a C-119 aircraft while enroute to Tripoli from Tunis. The object appeared very bright with a halo of diffused light surrounding it and was observed off the right wing of the aircraft flying at 7,000' on a 170° heading making I.A.S. of 170 knots. Length of observation varied from 5 to 55 minutes by assorted members of the crew some of whom stated that it appeared to ascend and then descend slowly.

II. Discussion of Incident

Four out of six of the crew stated that, in their opinion, the object was not a star, whereas the remaining observers would not commit themselves on a conclusion. Since the sighting seemed to be astronomical in nature, Project Blue Book submitted it to its contract astronomer, standard operating procedure in such cases. It was determined that Venus was probably responsible for the observation in that it appears at an approximate 200° azimuth in Libya on this date, and under fair weather conditions would appear very bright. The fact that it remained almost stationary and was observed for a long period of time would support this conclusion.

III. Conclusion

Probably Venus.

30 April 1963

I would like to know if there is any possibility of having a copy of the following report made available to me. I am a resident of the United States and I am interested in the case of the unidentified flying object which was sighted at the Naval Air Station, Pensacola, Florida, on April 22, 1963. The report was made by a pilot who was on duty at the time of the sighting. I am interested in the report because I am a pilot and I am interested in the possibility of having a copy of the report made available to me. I am interested in the report because I am a pilot and I am interested in the possibility of having a copy of the report made available to me.

Very truly yours,

P.S. Sirs I would also like to know if I could have the form's that one must sign after he has seen an "Unidentified Flying Object's". Thank you.

16. On 11 February 1953 in the area of Tunis and Libya an aircrew witnessed an object for 55 minutes during a flight into Tunis. The object of this sighting was determined to be the planet Venus.
