DATE 7 July 1953

My wife & I were sitting on our front porch when, at the time as given herein, this moving light caught the attention of us both. It was moving rapidly in a direction from north to south, it was approximately perpendicular to us as we first observed it (directly in front of us).

This object flew in this north to south direction for nearly half of our visible horizon, at about four-fifths ($\frac{4}{5}$) of this distance it began a wide turn which when completed was about exactly perpendicular to the original north-south course. It was now headed approximately due east. The west to east direction was about one-half of magnitude of north-south length of flight.

During our entire observation the object continuously pulsed from yellow to orange to yellow etc. at a rate of approximately one-hundred and twenty (120) pulsations per minute. Just prior to disappearing

The object changed color from yellow rapid through the shades of orange to a brilliant red then it completely disappeared. We could see all about where the object disappeared and there seemed enough light that it should have been visible. At no time did it make any angle or direction of movement towards the earth nor did it deviate from a path parallel with the earth.

I should like to note that in one of our local papers there appeared an article stating that many persons in the city area had seen a meteorite and that it appeared to explode over the city. To me, this object did not in the least resemble any meteorite, shooting star etc. that I had ever seen; it did not angle at the earth (as if drawn by gravity) and it made a definite 90° turn parallel to the earth, it had ~~no~~ tail, trail or spume whatever.

In this report I have attempted to give a clear, concise description of what we saw - I hope it may prove helpful. If anything in this report conflicts with my telephone conversation of June 24, 1953 then what I have set down in this writing is the more correct, since I have had time to consider the thing more fully, and if my estimates will not jibe then it is only because the thing was difficult to guess about (e.g. size, speed, shape etc.)

Again I hope to have been of some help and if any further information is desired feel free to contact me at any time.

Yours truly
