Did I See a Flying Saucer—or Cigar— Over Canterbury?

By a Staff Reporter

WAS there a flying saucer, a flying cigar, or anything similar that hundreds of people throughout the world claim to have seen in the sky, over Canterbury yesterday? Reporters are not paid to have hallucinations and until yesterday I did not believe that such things existed. Since 3.46 p.m. yesterday I have not been so certain.

It was precisely at that time that an object which was not an aeroplane, a glider, or a balloon disappeared into a cloud bank over the foothills of the Southern Alps travelling quickly north.

We, my wife and I, had watched that object for seven minutes, at least.

When we first saw it, it was gleaming brightly and hanging motionless in the sky probably at a height of more than 10,000ft about four miles west of Coutts Island.

It was cigar shaped and looked as though it might have been chromium-plated, so intense was the light it reflected.

At no stage did we hear any noise in the sky which could possibly have come from it.

Motionless

We watched it for about three minutes while it hung motionless. I then looked at my watch and saw the time was 3.40.

Within a minute it started to move off quickly westward towards the only cloud bank in the sky over the Southern Alps. As it moved it emitted what appeared to be two puffs of pink vapour.

During movement its shape did not change but it became smaller as the distance increased.

We watched it from the road which runs from Coutts Island to the back of the Christchurch Airport and though the cloud bank was about thirty miles away and its top was at a height of 6000ft (checked with

the Weather Office, Harewood) the object could be seen quite plainly when it was over the bank.

It stopped momentarily over the cloud bank, circled and then headed north into the cloud.

Between 3.40 and 3.45 p.m. yesterday a meteorological balloon was released from the airport. When it was released it travelled from east to west for a distance of two thousand yards and then it retraced its track.

Not Balloon

An official at the Weather Office said this morning that balloons can be seen from quite a distance with the naked eye, but they are often hard to pick up in sunshine as brilliant as it was yesterday.

Balloons are spherical but this object was cylindrical. I am certain the object we saw was not a balloon.

Was the object we saw a flying saucer or a flying cigar? I do not know, but in future I will feel inclined to give a little more credence to reports of strange objects in the sky than I have done in the past.

FOOTNOTE. My colleagues regard me as something of a cynic. Apart from a cocktail before lunch I had an abstemious day.

New Zealand

Dear Sir,

One week has now passed since I wrote to the Commanding Officer Wigram H.Q. after telephone conversation in which he promised me a report also advising me to write to Air Traffic Control Officers. However H.Q., which I promptly did. I have not received a reply from either the Commanding Officer, or the Air Traffic Control Officer. I stated that I was interested in the Flying Saucer report published. I will wait a few days longer before writing again to them, I have not told or disclosed to them that I have forwarded Flying Saucer report to your Department and will not do so unless you require me to do so.

My reason being the unwelcome publicity given to Air Force matters and possibility in New Zealand Air Force of wide spread gossip amongst personnel.

The reason for the delay in writing to me by the C.O. Wigram and A.T.C.O. However is that they are unable possibly

to forward a report because of failure to obtain reports from the aerodromes in New Zealand, or perhaps just lack of interest in Flying Saucer reports.

My comment is.

1 I believe Constellation U.S.M.T.S. landed just before 4.30 pm after flying round the South Island. [Distance from Nelson to Invercargill 678 MILES] The questions are, How far did they fly and what time did the Constellation take off and where from.

2 Ice formation on Australian Air Force Lincolns on 25th Nov.

Such ice could cause glitter in sun rays.

If sun was behind and above observer. cigar shape would be accounted for by angle of flight to or from observer.

I have watched RNZAF plane flying directly away south from me and sun behind me after six minutes the twin engine plane was just a spec. and almost invisible but on the turn into Wigram the sun caught rays shone on the lifting and ^{TURNING} ~~flying~~ right angle wings and fuselage. the whole outline of plane was plainly visible at over twenty miles.

3 On Sunday November 28th one week later than the first report. I was in my potato field at Rangiora watching a RNZAF plane which flew over head and then south at approx 3000ft after watching and timing it
10.57 A.M.

TIME 11 A.M.

by my OMEGA watch. I noticed a brilliant and
what appeared glittering plane at about 12000 ft.
crossing from East to West. over the RNZAF plane
at about the same position as the one noticed by reports
on 21st Nov. The engines of which were clearly audible
and of different tone to R.N.Z.A.F. plane. This may have
been another R.N.Z.A.F. plane flying at higher altitude
And only the Commanding Officers can prove it.

I am sure that the Commanding Officers will report
to you, instantly, if you communicated with them.

Yours sincerely,

~~XXXXXXXXXXXXXXXXXXXX~~

Commander

25th Nov 1954

Department of the Air Force Headquarters.

United States Air Force

Washington 25 D.C.

Dear Sir

On June 14th of this year 1954, I forwarded a letter to the Air Technical Intelligence Center Wright Patterson Air Force Base Ohio, the letter contained negatives of which also newspaper landscape photos of area also photographs of part of Australian aeroplane struck by lightning

I stated in letter that I would forward newspaper clippings of a sighting, by aerial top dressing pilots at New Plymouth N.Z. of objects sighted at sunrise when they were about to commence operating. The reports were published in the papers and a tape-recording made of the pilots eye witness account.

However I was unable to obtain a clipping although I looked through old newspapers in library some papers were missing from files. I have not disclosed and do not disclose my correspondence to your departments regarding which

I have not yet received an acknowledgment of your department's receipt of my letter of June 15th.

I forward herewith a newspaper clipping dated Nov. 22, 1954. My comment on the sighting is that it was authentic. At that time on Sunday 21st 1954 I was hoeing potatoes in my field at Rangiora and I heard an aeroplane in the direction of Amberley, that is north east of Rangiora. This was just an ordinary New Zealand aircraft. (I have communicated with the Commanding Officer Wigram Air Force for identification of aeroplanes at that time, he states that only four of his ~~aircraft~~ Air Force planes were out on Sunday and promised to reply by letter. The Commanding Officer's comment was that Hawkewood Visport air craft and Aerial Top dressing aircraft were not so easily accounted for, and recommended me to write to the Air Traffic Control Officer at Hawkewood air port. I explained to the C.O. that I was interested in Flying Saucers.

The most important thing is that a few minutes after hearing the aircraft in the north east I heard a deep toned aircraft in the south west, the tone of the engines was sufficient to cause me to stop hoeing potatoes and to look in that direction I noticed cloud bank

3.

and failed to pick up aircraft, as the Melbourne Trans-Tasman Australian aeroplanes fly almost due West of Harewood Airport. I thought that the noise of the aircraft was from a Trans-Tasman plane all of which I have seen, have had four engines. I have not disclosed to anyone that I heard a deep toned aircraft in the south west. in the direction of Darfield - Oxford. I have been informed that it was definitely not the Trans-Tasman Melbourne plane.

As my position in the potato field was sixteen to twenty miles north-east of the reporter who was at Bouter's Island that would account for me hearing the engines. The reporter was on the road near the airport which is south of the river.

I enclose herewith a map of area. I also enclose newspaper photo of eighteen to twenty year old youths short duration training camp. The white canvas tents may have caused a plane to circle though the distance would be 50 (fifty) to eighty miles from Darfield.

yours sincerely

2nd Dec 1954

Dear Sir

Today, I have received a letter with report from the Commanding Officer R.N.Z.A.F. Station. I enclose the letter herewith.

I have not received a letter from the Air Traffic Control Officer at Harwood Airfield.

If I do receive a letter from A.T.C.O. at Harwood I will forward it as soon as possible.

I repeat my statement that I have not disclosed my correspondence with your Department, my reason being, that widespread publicity is given to Air Force matters, and also the possibility of gossip among R.N.Z.A.F. personnel. I will notify the Commanding Officer if you require me to do so.

Yours sincerely,
~~W. J. J. J. J.~~

Station- WIGRAM

1st December, 1954

Mr. [REDACTED]
[REDACTED]
KATAPOI.

Dear Sir,

In reply to your letter dated 23rd November, 1954, I have investigated the movements of R.N.Z.A.F. aircraft from this airfield between 3 p.m. and 4 p.m. on the day in question.

A Mustang and Harvard were airborne between these hours and were carrying out exercises in the local flying area. It is quite possible that the Mustang was over ^{the} Katapoi, Amberley, Rangiora area at high altitude (20,000 - 30,000 feet) but as far as can be ascertained the Harvard was not in the vicinity.

It is pointed out that in all probability quite a few civil aircraft were flying from Hawkewood at the time and their movements could be obtained from Air Traffic Control at that airfield.

I trust that this information may be of some value.

Yours faithfully,

(R.R. DIX)

Group Captain, Commanding,
R.N.Z.A.F. Station, WIGRAM.

IN REPLY REFER TO

AIR DEPARTMENT
CIVIL AVIATION BRANCH Administration,
Christchurch Airport,
CHRISTCHURCH, N.Z.

2nd December, 1954.

Mr. [REDACTED]
50 Sidey Quay,
KAIAPOI.

Dear Mr. [REDACTED],

Regarding your inquiry about aircraft movements over the Woodend area on Sunday, the 21st November, I have to advise that on that day there were 364 movements of aircraft in the Christchurch local area. It is possible that any of these flights may have passed over Woodend.

In view of your interest in flying saucer reports as stated, and inferring that you have seen something which leads you to believe that such an object has been in your area, I have to advise that about 3.30 p.m. a meteorological balloon was released from the Weather Station at Christchurch Airport and may have been seen by you.

Yours faithfully,

[Signature]
(E. C. Brooke)

STATION AIR TRAFFIC OFFICER

Office, ~~_____~~, who, it has been proved, is more reliable.

I will not make further inquiries unless you require me to do so.

This concludes my correspondence on this Flying Saucer report.

I would appreciate the return of the letters to me by the C.O. ~~_____~~ and the Station ^{AIR} Traffic Officer Harwood.

I will of course acknowledge by letter when they are returned.

I am not a member of any Flying Saucer Club.

Yours sincerely

Dear Sir,

I enclose herewith the Harewood Airport Station Air Traffic Officer's letter to me and report.

This letter is not useful to me and does not cover the specified time 3 p.m. to 4 p.m. as I requested in my letter of inquiry.

When I first telephoned the Commanding Officer Wigram R.N.Z.A.F. and made my first inquiry there and was told, promptly, that only four flights were made from Wigram, and advised to get in touch with Air Traffic Control Officer Harewood. I requested the Commanding Officer to enquire of the Air Traffic Control Officer, my reason being that he would get a more definite reply than I would. I explained that I would write independently.

Further enquiries should be made from the Commanding

ATIAE5/Sgt Drepperd/rc/69216

Mr. ~~XXXXXXXXXX~~

Kalapoi, New Zealand

Dear Mr. ~~XXXX~~

This will acknowledge receipt of your three letters, dated 25 November, 2 December and 6 December 1954, respectively. The information which you graciously submitted in the form of personal correspondence and New Zealand newspaper accounts of unidentified flying objects, has been recorded and will undoubtedly serve as a valuable supplement to our research material on this subject. For the purpose of completing our records, and with your permission, photostat copies have been made of some of the articles and letters which were forwarded for our review. This data will not be released to any press media and you may be assured it will be held in the strictest confidence by the Air Technical Intelligence Center.

On 23 November 1954, the Air Technical Intelligence Center forwarded the cloud negatives back to you via surface mail, and all of the articles and letters recently submitted by you are returned as inclosures to this correspondence. Also, attached for your convenience is the "U. S. Air Force Summary of Events and Information Concerning the Unidentified Flying Object Program." We hope you will find it to be of interest.

Concerning your specific inquiry regarding experimental cargo parachute drops, the article refers to poor visibility plus an additional hazard of increased wind velocities. The success of a mission of this type is primarily dependent on weather conditions. Many factors such as wind velocities, size and type of the parachutes (which partially determines the rate of descent), weight of the cargo, dropping height, etc., are all dependent on one another and must be considered in the mission planning of a drop. So, it may be readily realized that during experimental missions, such unforeseen circumstances as sudden change in visibility and wind velocities can disrupt a planned drop. A drop conducted under these conditions would be impracticable due to possible damage or loss of the cargo released, which results in a monetary loss as well as wasted manhours.

Air Technical Intelligence Center

5th Jan 1955.

Wright Patterson Air Force Base
Ohio.

United States of America.

Dear Sir,

Today I have received your letter of 23rd Nov. posted 1.30pm 24th Nov. 1954 with negatives of whilwida enclosed, also today I received your letter dated 27 Dec 1954 with all enclosures for which I thank you most sincerely. also for reply on cargo parachute drops.

I must at first draw your attention to the tremendous force and circular velocity of the cloud formation which whirled around very much faster than cyclonic winds. That is clearly fixed on my memory.

I am not a scientist and cannot say whether the force which caused the formation was lightning or nuclear transmutations but I do warn all pilots to avoid contact with such formations in

2

early stages, it is possible that they may lose cyclonic force in time, I do not know, but the last of the two photographs that I took shows perfect circular formation which indicates terrific whirling internal speed. The first photograph shows pieces of cloud that got left out of the cyclonic whirling force.

I repeat my statement, in my original letter that while I was watching the whirling formation, I formed the opinion that if an aircraft encountered such a whirlwind it would not survive to tell the tale.

Would it be possible to attach wind velocity measuring gauge and radio active geyg counters to parachute dropped through thunder clouds or such like cloud formations with the object of discovering whether they have been charged with a force either by lightning or by nuclear transmutations from Sun or any other source.

I enclose herewith the newspaper clipping from my evening paper at the time of New Plymouth's aerial top dressing pilots sightings. I had placed clipping

in a book with other clippings and when I wanted it I could not find it, however I found it only a few days ago, just where I put it. My reason for stressing its importance is that it so neatly resembles a sighting in the U. S. Air Force Summary of Events and Information Concerning the unidentified Flying Object Program. The item is No. 1. No. 1. Jan 1951. Oakridge Tennessee.

— New Plymouth N.Z. May. 25th 1954. as for enclosed clipping in Christchurch Star-Sun.

My comment is that New Zealand Volcanoes were active at the time and dust laden atmosphere may have been charged by lightning or such force. I do not know whether volcanoes are radio active or whether the force that causes volcanoes is the contraction of the Earth's sphere, and subsequent internal pressure. (Read Hays Investigation of the Universe) Sun) N.Z. has Geothermal bores and Heavy Water.

I conclude this letter with the assurance that if possible I will forward any local flying saucer

4.

reports that I am able to. I understand that in my case the nearest Air Force Base would be Air Technical Intelligence Center Wright Patterson Air Force Base. Ohio U.S.A.

Months may pass even longer time, but do not think that I have forgotten.

yours sincerely
