10. BRIEF SUMMARY OF SIGHTING		11. COMMENTS		
Four (4), dull and reddish objects in a "V" formation were noted by observer while he was studying jupiter through a telescope. Objects were not seen through the telescope but with the naked eye. Observer states that these objects were definitely not astronomical in nature. Objects flew an a northerly direction and were observed for a period of ten (10) seconds. Manner of disappearance unknown,		Due to the brevity of the sighting and the imprebability of further investigation jielding further data of value, no investigation authorized by this organization. Heavy air traffic over this area and the possibility of the sighting being navigation lights or jet afterburners lead to a possible aircraft sighting.
