7. LENGTH OF OBSERVATION	8. NUMBER OF OBJECTS	9. COURSE	Onsufficient Data for Evaluation Unknown
unknown	UILU -	E then retur	
to move toward the East and sale return. Observer used binoculars. Time of day was dusk. Report very scant.		Due to fact that sighting was in the vicinity of Laguardia and Idlewild airports, and the sighting was near sunset, the object is evaluated as probable aircraft landing at one of above mentioned airports. The course of the object seems to substantiate this. No investigation authorized
