8. NUMBER OF OBJECTS

One (1)

10. BRIEF SUMMARY OF SIGHTING

7. LENGTH OF OBSERVATION

Five (5) Seconds

One (1) round, green object, the size of the moon with a fuzzy outline appeared thru the windshield of the observers' car for a period of five (5) seconds and then faded. The object seemed to have a orange colored tail that was approximately three (3) times the size of the object in length. The tail appeared to be "cut off" in a straight line and did not come to a point. The course of the object was a level flight path to the ESE

11. COMMENTS

ESE

9. COURSE

Due to the delay in transmission of the report no investigation was authorized. A check of maps and radio facility charts failed to reveal any beacons or flight paths in the area of sighting. The fading of the object and the close proximity of the two colors would tend to eliminate the reflection possibility. In the opinion of this has the sighting was generated by astronomical activity, i.e., meteorite. This report was received by AF Form 112.
