DETACHMENT #4.
4679TH GROUND OBSERVER SQUADRON
P.O. Box 1092
Colorado Springs, Colorado

2 October 1956

SUBJECT: Unidentified Flying Object

TO:

Commander
4602ad Air Intelligence Service Squadron
ATTM: AISOC
Eat Air Force Base
Colorado Springs, Colorado

The inclosed report of an unidentified flying object is forwarded in accordance with phone conversation between Lt. Muchyowsky, your organization and Lt. Kingery, this unit.

FOR THE COMMANDER:

HUGH E. KINGERY lat Lt., USAF Adjutant On the morning of 28 Sep 56, the undersigned interviewed Mr, and his wife Mrs L. Craig, regarding a report of an unidentified object seen moving over the Craig area the evening of 26 September 1956.

The object is described as a string of lights, approximately ten, preceded by three or four lights, smaller and immediately above and slightly ahead of the others. These lights were uniform in distance, and appeared to be similar to a string of cabin lights on a modern passenger a/c as seen from the ground.

PLASSIA.

Description would seem to follow the folg diagram:

TITIES TO STATE

die Acapung

The shape and color of the object are unknown, as it was dark at the time of sighting. No other lights were sighted, so it is not known if the object had wings or tail structure. No smoke or vapor trail was seen, also because of darkness.

The lights were first sighted by Mr as he was climbing the outside stairs to his second floor apartment in down town Craig.

He said his attention was first called to the object when a bright flash in the sky caught his eye. He then watched the lights move from a point approximately one mile directly north of Craig south east till it passed out of sight, to the south east.

Approximate speed of the object was 85 to 100 MPH. As the object flew by, a bright light similar to a carbon arc light began flashing on and off. In Month words "looked much like an airplane beacon flashing." It continued till object was gone.

At no time during the observation was any sound heard. Which

is strange in view of the fact that it passed almost directly over Craig. Metabolieves the object was roughly one to two thousand feet above the ground.

There were three other witnesses to this action. All agree on time, course and visual characteristics. Object was first sighted at O155 Zebra time, and was in sight approximately 10 minutes. It was first sighted at grid coordinates November Lima 2732, and flew a direct course to November Lima 3031, where it passed out of sight. The light was still flashing with regularity, seeming to be on top of, or on the sterm section of the object.

Weather was fair, no cloud cover, with thin haze in the east.

No wind, temperature 55-50.

Mr is 28, employed as a night baker, veteran of the Navy (Security Dept). Mailing address, Craig.

Other witnesses: Mrs (wife)

Mrs (mother)

This report was first made to James M. Pughe, Moffat by CD in Craig. Mr Pughe checked with Craig airport. No a/c had taken off or landed there recently.

A check with GCC posts in this area has been negative as regards any object of this description.
