Long duration!! If the whole object is 8" diameter, the whole object went to 3 ft. long, if broken, let alone a third piece. (INCONSISTENT)

The whole object is only 8" diameter,

how can two parts of it be 1.5 ft diameter

Note! Inconsistent

at 255° from South Pass - would point almost directly to lighthouse at S.W. Pass. (possible light was mistaken for something else?)

Comment:

except for the very long duration (12 min) the object has all descriptions and characteristics of a bolide.
