ANALYSIS. ITEM 12: NEGATIVE

BT

06/2209Z DEC RJEPQW

*ATTC Conclusion: Detailed analysis
and mathematical treatment indicate
Source obviously unreliable.
Object was 2.2 miles in size and
would have been seen by others over
Long Island.*

(Other)

Contradictory info:

① Claims object observed through window, for 45 to 60 seconds - yet gives speeds of 1500 - 2000 MPH!

② States flight path was from 170° to 230° - This is from SSE to SW. Yet later states obj. went from SE to East

③ Any object (crawling) going from one end of the window ledge to the other (using as sighting ref.) in 60 seconds - would not be going at the speeds given!

④ Note: Claims object was size of 3-4 times larger than C-54 at arms length!

THIS WOULD HAVE COVERED HIS WHOLE RANGE OF VISION - AND DEFINITELY BLOCKED THE WINDOW!!! IMMENSE SIZE (Unreliable source)

LOOKING SOUTH - THROUGH A WINDOW.

* If 3-4 times larger than C-54 over Long Island, certainly would have been seen by others. No other repts. Civ. or Military

① States altitude 1000 ft

② States elevation 60°

Distance from his position to UFO?

$$\tan 60^\circ (1.7) = \frac{1000}{x}$$

$$1.7 \overline{) 10000} \\ \underline{85} \\ 150 \\ \underline{136} \\ 140$$

→ approx 600 ft

③ Source states object 4 times larger than C-54 (i.e. approx 100 ft length)

④ ∴ object approx. 400 ft. long. AT ARMS LENGTH!!!

→ AT ARMS LENGTH (2 ft)

⑤ Source estimates:

$$\frac{\text{Size of object (Arms length)} \frac{400 \text{ ft}}{2 \text{ ft}}}{\text{Arms length (2 ft)}} = \frac{\text{Size of object}}{\text{Distance to object}} \frac{x}{600 \text{ ft}} = \frac{400}{2} = \frac{x}{600}$$

$$\frac{120,000 \text{ (ft of object)}}{5280 \text{ ft (mile)}} = 22.5 \text{ miles in size.}$$

$$= 2x = 240000$$

$$x = 120,000 \text{ (Size of object - 4 times size of C-54)}$$

Note: Object 22 miles in length → 45 seconds to cross window!!!
