7. LENGTH OF OBSERVATION 1-3 min	B. NUMBER OF OBJECTS		Other	Evaluation
Abnormally large blip as consignal returns. Speed of old 4500 knots, 3 paints of racing magnetic heading (azimuth). Magnetic heading. Slight ar	ompared to regular of estimated about lar. Appeared 270° Disappeared 270° c. Faded to W.	on radar, with Speed of objt knots. Objt was mag heading of on this same hupon appearing reported. In v	was observed for land of visual sighting was reported to be apparently seen of 270, and it disappeading. What elevate and disappearing was not is evaluated as ata.	4500 na eared ion was vas not ertinen

ATIC FORM 329 (REV 26 SEP 52)

Memo (AFCIN-4E), 19 Apr 61, Request for Review

let Ind (AFCIN-4Ela/Mr. Bryant/je/74201)

9 May 61

TO: AFCIR-4E (Maj Friend)

- 1. The report dated 14 Apr 61 from Anderson AFB has insufficient information upon which to base an evaluation. For example, "Description of flight path and maneuvers of object" is indicated as "N/A", and range of the target is not given.
- 2. Report dated 17 Feb 61 has been evaluated and evaluation indicates that considering speed of target, a reentry body (or meteorite) is about the only possibility if the target was real. The abnormally large size of the blip is not consistent with that type of target, however. Anomolous propagation or equipment malfunction are other possibilities. Check should be made of cognizent agencies to determine if reentry body or meteorites were in area.
- 3. Evaluation of report from 864th ACW Sq., Yuma, Ariz., dated 28 Feb 61, indicates chaff drop is most plausible explanation. Check of Air Force activities for possible chaff exercise could be made.
