bootball field. Lighted around edge. Lights whitish yellow. Too nervous to notice color of objt. Looked like sled with running boards. Substance and body depth but unable to say what type of material. High tail. Size not known but vertical running fm center to end. No sound. In car stopped beneath objt. Could not see thru but could see around. 1st sighted fm 3 blocks away. Estimated 50' off groung. Stationary 3-5 min then moved straight up and to E, rising and disappearing in 5 sec. No weather inversions. No wind. No clouds. Weather clear and dry.

objt would indicate possible balloon except for altitude of 50' off ground and sudden rising. Completeness of description and details given by 2 observers gives little info upon which to ka classify objt into known categories and explain sighting.
