10. BRIEF SUMMARY OF SIGHTING		11. COMMENTS			
Two 11 year old youths found objects that supposedly fell to earth with whooshing sound. Warm. Samples sent to Air Force for analysis. See Specimen 7-3745-446		Samples submitted for analysis indicates that material was plastic residue of Type 66 Nylon, a piece of cream colored substance identified as polyethylene and other scrap fm extrusion machine. Story by youths classed as hoax; materials, as plastic from local industry.

Two youths, age 11, informed their science teacher at school that they had observed a gray object falling from the sky on 20 Oct 62 with a whooshing sound, and landing in the sand about 20 ft from them. One of the youths claimed that he touched the object and it was warm, so he did not pick it up. The teacher suggested that they bring the object to him. This object was turned over to authorities at the U S Naval Base, Newport, Rhode Island. The object was then turned over to the Air Force for analysis. The samples were identified as being similar to US Nylon, Number 66, a brown sample was identified as polystyrene and the cream colored inclusion within the brown sample was identified as polyethylene. The appearance of these samples indicate stronly that they are the "tailings" or "end-of-run" from extrusion machines producing plastic forms or foils. Such "scrap" or discarded materials are often seen in just this type of physical form and condition. The materials named above are all commin and widely used plastic materials. Tests have indicated that none of the samples have been exposed to a space environment or have been used in relation with any space application.

The material was compared with known waste material from extrusion processes of industries in the local areas utilizing nylon, etc, in the manufacture of insulated wire and cable, and found to be of similar appearance and consistency.

CLASSIFICATION WILL EE ASSIGNED AT THE END OF TO

THIS IS IN CONFIRMATION OF MY G-29 DATED NOV. 13. PLASTIC SAMPLE
DESILNATED AS WHITE HAS BEEN IDENTIFIED AS SIMILAR TO NYLOM 66.

PLASTIC SAMPLE BROWN WAS IDENTIFIED AS POLYSTYRENE WITHIN THE BLACK
BAMPLE THERE WAS SOME GRANGE MATERIAL AND IT WAS ALSO POLYSTYRENE.

ALSO WITHIN THE BROWN SAMPLE THERE WAS A LARGE SPECIMEN OF CREAM I
COLORED PLASTIC AND IT WAS IDENTIFIED AS POLYETHYLENE. THIS WAS IN
THE FORM OF BALL AND ACTUALLY DISPURSED WITHIN THE BROWN SAMPLE. THERE
WAS NO INDICATION THAT THESE MATERIALS WERE USED IN RELATION WITH ANY
SPACE APPLICATION. THE SAMPLES APPEARED TO BE MATERIALS THAT CAME OUT
OF AN EXTRUSION MACUINE AND WILL FE CLASSIFIED AS SCRAP. ALSO
POSITIVE IDENTIFICATION OF RUBBER AND RUBBER TIRE WAS MADE AND WAS
FOUND THAT ALL COMPONENTS OF RUBBER TIRE AND TUBE WAS MADE OF NATURAL
RUBBER. THE CORD IN THE TIRE WAS MADE OF COTTON. GAPLS :
