MYSELF ON 14 MAY 65, I WOULD APPRECIATE ANY THOUGHTS OR COMMENTS YOU MIGHT HAUE ON THIS.

M/R on 28 May Sgt Moody returned Capt Rebinsins request for our opinion of the report. Informed that A/C was the most likely cause. Data too incomplete and conflicting for analysis. Duration and speed reported incompatible. Range and visual characteristics as view through BI also not in accord with report. Para 3 beleived to be Satellites (NOT ECHO I or II) and we de not have Equatorial crossings on the others. Without FRANDITIONAL data, all we can do is speculaters
