

PROJECT 10073 RECORD

1. DATE - TIME GROUP 22 Mar 66 Night	2. LOCATION Richmond, Maine
3. SOURCE Civilian	10. CONCLUSION Other(SEARCHLIGHTS)
4. NUMBER OF OBJECTS Two	
5. LENGTH OF OBSERVATION Not reported	11. BRIEF SUMMARY AND ANALYSIS
6. TYPE OF OBSERVATION Ground-Visual	Observer reported seeing two lights which appeared to his left then crossed towards his right and reappeared again on his left. Continued in this manner several times, on a definite period. Each light had a tail which was anchored one in the west and one in the north in the directions of Auburn and Augusta respectively. Observer states that since the establishment of beacons at Auburn and Augusta he had seen the lights several times before he realized that they were actually ships from Mars. I got the idea that the observer was actually poking fun at other people who had seen these lights in the area rather than making a report. 2 Witnesses Man & Daughter

Richmond, Maine

March 29, 1966

U S Air Corps

Div. of Flying Saucers

Gentlemen:

On Tuesday evening, March 22, 1966, my daughter and myself observed what I believe to be the same flying saucer lights which were widely reported in the Witchfield, Gardiner, and Richmond area.

My House is located on the northern outskirts of Richmond village and we had a good opportunity to observe the lights which appeared to our left, crossed toward our right disappeared, and reappeared again on our left.

We also observed that each of these two lights had a very definite period much like the air beacons at Augusta and Auburn, also that each light had a very faint, thin tail which was anchored, one almost due west of us, the other almost due North, the directions of Auburn and Augusta respectively.

Since the establishment of various beacons in this area (about thirty years) I have often observed similar lights without realizing that they were ships from Mars.

Yours Truly,
