Dear Major Quintanilla:

In reply to your letter of Aug.4, enclosing four reports on objects seen night of July 13/14,1966 from the Omaha,Neb. area, I have now gone over them carefully.

My opinion is that they refer to two objects, both quite obviously bright meteors i.e. fireballs.

The first has seven reports, for roughly 14/0400 plus Z, the other for 14/0800 Z-and that seems a very qustionableone as to observed data. This last seems quite untrustworthy. As for the other seven, they seem to refer to same object going roughly from SW towards S or SE. The reports are more uncertain than usual, except for the excessive durations given by five of the seven. But if a fireball lasts over 10 seconds, usually people tend to exaggerate the duration.

None of the objects have UFO characteristics; you may safely classify them as meteors. You will be glad to know that I now have the preliminary path of the April 25 fireball. Thank you again for your valuable help in that.

Sincerely yours,

Dear Dr. Olivier,

Reference the attached unidentified flying object reports from the Nebraska area. These sightings appear to be meteor observations. However, we would appreciate your opinion on these particular observations as to whether or not you feel that they are meteors.

We still have not received any late reports from the Norfolk, Virginia area for 25 April 1966.

Any assistance you may be able to provide on the Nebraska sightings will be appreciated.

Sincerely,

Gentlemen:

On Wednesday, July 13th exactly at 10:10 pm I saw the meteor in the southwestern sky. We looked there immediately observed to me like the meteor was behind a cloud bank for a moment or so we saw it and then appeared to disappear & then appear again. It ~~traveled~~ appeared in a southerly direction - judging a little to the east. It seemed almost parallel with the horizon. It was white, red and blue flashes.

Sincerely yours,
