PROJECT 10073 RECORD

1. DATE - TIME GROUP	2. LOCATION
25 Feb. 1967	Fargo, No. Dakota
3. SOURCE	10. CONCLUSION
Civilian	Unidentified
4. NUMBER OF OBJECTS	
One (1)	
2 - 4 minutes	11. BRIEF SUMMARY AND ANALYSIS 2 boys, 16 & 18 years of age who, according to investigating officer and Hynek (who personally investigated the case) appear to have good reliability saw a luminescence "blob" arise from the ground and ascend with acceleration in a northeasterly direction. The night was dark and partly cloudy. Photographs are consistent with verbal account by boys and indicate diameter of roughly spherical glow to be 5 feet or somewhat larger. Two polaroid photographs were taken. In outward appearance the glow resembled a hypothetical plasma ball and this could be the explanation if it can be shown that such plasma balls are physically possible.
6. TYPE OF OBSERVATION visual	
7. COURSE Azimuth 30 Alt. 15, end: Azimuth 40 Alt. 40	
8. PHOTOS D Yes X No	
9. PHYSICAL EVIDENCE	
□ Yes ĭ No	This chied written & ovaluated by JAH
