18. We wish to know the angular size. Hold a match stick at arm's length in line with a known object and note how much of the object is covered by the head of the match. If you had performed this experiment at the time of the sighting, how much of the object would have been covered by the match head?

maybe about 1/2. I'm not sure about this

19. Draw a picture that will show the shape of the object or objects. Label and include in your sketch any details of the object that you saw such as wings, protrusions, etc., and especially exhaust trails or vapor trails.

Place an arrow beside the drawing to show the direction the object was moving.

(outline of trees & houses)

A. 3 main divisions of light

B. glow surrounding object

Yes

☒ No

| c. Windshield | Yes | No | g. Theodolite | Yes | No |
| d. Window glass | Yes | No | h. Other _____ | | |

26. In order that you can give as clear a picture as possible of what you saw, describe in your own words a common object or objects which, when placed up in the sky, would give the same appearance as the object which you saw.

It simply looked like Three unusually bright lights placed right next to one another, horizontally. Even when viewing it through binoculars, all I got was a magnification of the light, - no details, etc. (Binoculars - 7x50, 376 ft. at 1000 yds, No. 30040825)

27. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you first saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you last saw it. Place an "A" on the compass when you first saw it. Place a "B" on the compass where you last saw the object.

28. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

29. IF there was MORE THAN ONE object, then how many were there? _____
Draw a picture of how they were arranged, and put an arrow to show the direction that they were traveling.

I had the impression that it was a single object with three divisions of light. However, it could have been three separate objects moving as one, and I wouldn't have known the difference.

30. Have you ever seen this, or a similar object before. If so give date or dates and location.

I have seen similar objects before in the same general area, but not as unusual and for shorter lengths of time. They seemed much farther away. I'm unsure about dates, say, between the last week of April and the third week of May as many as 3 times a week. (Approximate)

35. Information which you feel pertinent and which is not adequately covered in the specific points of the questionnaire or a narrative explanation of your sighting.

Regarding Question 28:

The object's extremely bright glow (described AT ①) lasted only about 8 seconds or so, then reverted to its original shape. When it began to pick up speed (AT ③) it began to flicker, and the flashing lights resembled those of a plane.

I have seen other objects similar to what I have described, but I chose to explain this particular one because of:

1. its closeness
2. extremely odd behavior
3. presence of a witness
4. favorable weather conditions

Dear Major Quintanilla,

If the staff of Project Blue Book figures out what I've seen, would you please let me know? I would appreciate it very much.

Sincerely,

Pending

Dear Major Quintanilla,

I am writing in regard to "objects"
(I don't know what else to call them) which
I have been observing in the sky at
night from April 19, 1967 up through
the present time. I have waited until
now to write because I wanted to
make sure they weren't planes, and I
didn't know who to write to until
recently.

Can you please help me? I don't
know what to do about this, and it
may sound silly, but just in case
something happens I want to tell the
proper authorities about it. (I am a
17 year old high school senior).

Thank you so much.
