

PROJECT 10073 RECORD

1. DATE - TIME GROUP 12/1 27/0903Z	2. LOCATION Off the coast of South Carolina and Georgia
3. SOURCE civilian	10. CONCLUSION INSUFFICIENT DATA FOR EVALUATION <i>jjt</i>
4. NUMBER OF OBJECTS to 7	Comments: See reverse side of card
5. LENGTH OF OBSERVATION to 4 mins	11. BRIEF SUMMARY AND ANALYSIS The observer sighted five to seven orangish lights that were in a line and staggered upward on a titled axis. The lights were seen for three to four minutes and suddenly went out "as if turned off." A second pilot, 11 minutes later and 128 miles away, reported that he saw a single white light, then reported that he saw seven lights forming a triangle then all disappeared. Both pilots are reported to have placed the lights just off the coast lines of South Carolina and Georgia.
6. TYPE OF OBSERVATION air visual	
7. COURSE confusing	
8. PHOTOS ☐ Yes ☒ No	
9. PHYSICAL EVIDENCE ☐ Yes ☒ No	

COMMENTS: The geographical location of the first pilot is not given. The direction of travel is confusing, since it is given with respect to an unnamed (in the TWX) airfield. With the information given it is impossible to determine if both sightings were of the same lights. Because the information was so sketchy both pilots have since been requested to complete a AF Form 117 but neither has done so as of 28 August 1968. The 32nd Air Div at Gunter Field, the 3rd Air Div at Ft Lee and 792nd radar sight at Charleston were contacted at the time of the sighting but none carried any indications on their scopes. Scheduling units for refueling operations in the South Carolina, Georgia area were contacted with negative results. All bases on the SE coast possessing aircraft capable of the speeds indicated (assuming the two sightings are of the same lights and that they had traveled 128 miles in 11 minutes) were contacted. None had aircraft in the area of the reported sightings. There were no known rocket launches that could account for the sightings. No pilots reported the lights to the Volunteer Flight Officer Network. No meteor reports were given to the American Meteor society for the time period in question. Because there is a gross amount of information lacking about the sighting and the fact that it cannot be established that the two different pilots saw the same lights the sighting is being carried as INSUFFICIENT DATA FOR EVALUATION,

1. The Aerial Phenomena Office is in receipt of an unidentified flying object (UFO) report which occurred on 27 September 1967 at approximately 0903Z. The sighting was of 5 - 7 lights that were seen off the South Carolina/Georgia coast. Although the sighting was reported by two different airplanes, the information is sketchy and incomplete. The duration seems to have been 3 to 4 minutes, but the course of the objects (lights) is not really stated.

2. Did you receive any similar reports for this approximate time and location? If so, we would appreciate whatever data you can provide.

3. Thank you for your continued assistance.

1968 August 12

Lt. Colonel Hector Quintanilla, Jr.
Chief, Aerial Phenomena Office,
Wright-Patterson A.F.B., Ohio.

Dear Colonel Quintanilla;

In delayed reply to an inquiry from you, I do not have information about the flying object(s) of S.C. and Ga. of 27 Sept. 1967, nor of the Neb. object of March 19/20, 1968.

There was a very bright fireball seen from many parts of Pa. and at least one from N.Y. on July 2, 1968 at about 8:25 p.m., E.S.T. A solution has been begun based on about 10 reports, half due to airplanes sent by Roth from Denver. I as usual need more data for a good solution. Do you have anything bearing on this object? It probably ended near long. 79°, lat. 41° N. And probably started over Maryland.

The Annual A.M.S. Report for 1967, which is issued as F.O.R. No. 184 has at last been issued from here. I hope you received your copy. Several fireballs were discussed in it. Also acknowledgement for the help your office at Wright-Patterson has given us.

Sincerely yours,

Charles P. Olivier

July 16th, 1968

Lt. Colonel Hector Quintanilla, Jr.
Chief, Aerial Phenomena Office
Aerospace Technologies Division
Production Directorate

Dear Colonel Quintanilla:

In reply to your letter, July 9th, requesting information on pilot sightings of September 27th, 1967 at or about 0903Z.

The pilot reports that we have on that date are more than six hours earlier, and in the European area.

Also, I would like to mention, there were no catalogued satellite re-entries on that day.

I am sorry that we can not be of any assistance at this time.

I am wondering, perhaps, if it might be of some help to you, to add you to our mailing list for copies of pilot reports as we receive them. Although this would include reports from all areas of the world, you could easily discard the ones that do not apply to this part of the world.

While many of these reports are meteoritic in nature, they may prove to be of some assistance to you in your work. I have found that all too often, especially in high density areas of human habitation, long enduring and bright meteors are mistaken for intelligently controlled flight characteristics. This goes more so for satellite re-entries because there is a greater amount of 'shedding of material' during the final stages of re-entry. This of course, is due to, and varies with, the manufacturing of the satellite and what duty it was to perform, while a meteor is quite solid in nature except for the slightly rare 'carbonaceous chondrites' which are porous.

Please let me know whether or not you feel this would be of help to you.

Sincerely Yours

H. E. Roth, Project Director
Volunteer Flight Officer Network

Aerospace Technologies Division
Department of the Air Force
Hq. Foreign Technology Division (AFSC)
Wright-Patterson Air Force Base, Ohio 45433

Dear Colonel Quintanilla:

In reply to your recent memorandum, Wallops did not launch any rockets on September 27, 1967, that would have been responsible for your reported sighting at 0903Z. However, we did launch two barium vapor cloud experiments here on October 3 and 4, 1967, which were visible for hundreds of miles (copy of news release enclosed).

If we can be of any further assistance, please let us know.

Sincerely yours,

Joyce B. Milliner
Joyce B. Milliner

FOR RELEASE: MONDAY P.M.
OCTOBER 2, 1967

Release No. 67-32

*Launched 7:20 p.m. EDT
October 3, 1967
and*

7:18 p.m. EDT October 4, 1967

BARIUM LAUNCHES

TO COLOR SKY

OF EAST COAST

With favorable weather conditions, the National Aeronautics and Space Administration will launch barium vapor clouds into the upper atmosphere from Wallops Island, Va., at sunset no earlier than October 3 and 4.

The huge glowing green and purple clouds may be visible over much of the eastern United States, hundreds of miles from the launch site.

Objectives of the experiments are: (1) to obtain measurements of electric fields and wind motion in the upper atmosphere by photographing and tracking the movement of ionized barium clouds; and (2) measurement of attenuation on passage of radio signals through the ionized barium plasmas.

-more-

Barium vapor releases will occur as the rocket ascends at about 75, 115, and 140 statute miles, forming three distinct clouds. An RF transmitter on board the rocket will transmit radio signals down through the artificial clouds, and receivers on the ground will determine the degree of attenuation or interference caused by passage of the signals through the ionized vapor. The clouds will be photographed from several camera sites along the East Coast.

The twilight launchings are scheduled for 7:18 p.m. EDT each evening on a Nike-Tomahawk research rocket. If weather conditions are unfavorable, attempts will be made on successive nights, with slight variations in launch times.

The clouds first appear light green tinged with red. They then turn purple in elongated patterns along the lines of the Earth's magnetic field. The clouds may extend across the sky for several hundred miles and be visible for 30 minutes to one hour.

The experiments are being conducted for the Air Force Cambridge Research Laboratories, Bedford, Mass. N. W. Rosenberg of AFCRL is the Project Scientist. William T. Burns is the Project Engineer for Wallops Station.
