11. BRIEF SUMMARY AND ANALYSIS

Observer sighted an object that appeared as a bright light. The object changed colors very fast (red, orange, green, white, and blue). After a while a second object appeared near the first. This object appeared similar to a dim star. The object moved roughtly from the west to SSE.

Comments: Although the observer stated that he saw the object on 5 Oct 67 at 1800 hrs., the witness stated that he saw the object on 6 Oct 67 at 2000 hrs. Although it is felt that the observers were probable watching stars or planets, it is impossible to evaluate the case as such, since the direction of flight is given from W to SSE. Because of the conflicting date and time it is being listed as Conflicting Data.

Dear [redacted]

This will reply to your letter, postmarked October 31, regarding your sighting of a UFO.

Many details necessary to identification of your sighting have been omitted. Therefore, if you care to complete the attached questionnaire, and forward it in the inclosed envelope, we shall try to determine what it was that you observed.

In the future, should you sight another UFO, please contact the UFO investigator at your nearest Air Force base immediately. By so doing, you will have a much greater chance of having your sighting identified.

In the meantime, we are sending you some material which may help you determine what you saw. We hope you will find it interesting, as well as informative.

Thank you for your interest in the Air Force project concerning unidentified flying objects (UFOs).

Dear Sir,

[redacted] and I [redacted] were camping on the Nullarbor .At 1 of a.m. when I noticed a star that was weird looking through the naked eye (kind of yellow). We then marked it off with a [redacted] object later came back with a figure of binoculars and observed it we found the object to be a bunch of colours(will be mentioned in the enclosed).It flickered the colours off as if it were sending a message to some one or another .We next remembered about our fixed position , we were to find out that the object had moved quiet a bit but to the opposite position compared to the stars.

We then noticed a fainter star in the lower latitude.We approximated that the star was in between the 7th to 8th magnitude.All of a sudden the star seemed to moved in very fast past another star.As we looked at it through a pair of binoculars all we saw was a yellow blur.We also noticed that the objects were now both moving.Just as jet airplane past them they both stoped even the first started stoped changing colars.As soon as the jet flew by the object started up and continued their journey to its right and continued across the sky.The little one came down to its low latitude and stayed there for the rest of the night.

The light seemed to explode

This information was filled out on a

Similar U.F.O. form previously

Card from Space 0940, 17 Nov 67 -

The light seemed to explode , then contract . It changed colors very fast .It always stayed the same 5 colors . It would speed up to cover the length of a ruler. It would turn sharply and fly into another direction, without pausing.With the approach of a airplane it suddenly paused. The plane was traveling South West. As the plane went out of sight the object began moving .

There were 2 objects .One about one quater as big as the other. A smaller object appeared from the bigger one. (We think !)Because it wasnt moving , WHEN IT WAS NEAR , and when it looked like , it was going to collide with the big one. It curved around and came down agin and hovered for at leas an hour . (We weren't able to observed any longer.)

Then the little one stopped the bigger one , start ed up and kept goin till it disappeared. It was going EAST.
